Steel Beam Calculation - Steel Beam 2

* You can add your own text, diagrams and photos here *

**Beam details**

**203 x 133 x 30 UB S275**

Beam effective span length: 5 metres

Width: 133.9 mm
Depth: 206.8 mm
Web: 6.4 mm
Flange: 9.6 mm
Radius: 7.6 mm
Mass per metre: 30 kg/m

**Safety factors, restraints & deflection limits**

Permanent load safety factor: 1.35
Variable load safety factor: 1.5

Beam is fully restrained along its length: No
Length between lateral restraints: 5 metres

Variable load deflection limit: Span/360 = 13.89 mm
Total load deflection limit: Span/200 = 25 mm

**Load details**

**UDL 1: Sloping roof, 30° to 45°**

Permanent (dead) load per square metre: 1.41 kN/m²
Variable (live) load per square metre: 0.75 kN/m²
Width of load perpendicular to beam, or height of load supported by beam: 1.9 metres

**UDL 2: Timber floor (domestic dwelling)**

Permanent (dead) load per square metre: 0.6 kN/m²
Variable (live) load per square metre: 1.5 kN/m²
Width of load perpendicular to beam, or height of load supported by beam: 1.33 metres

**UDL 3: Ceiling beneath sloping roof**

Permanent (dead) load per square metre: 0.3 kN/m²
Variable (live) load per square metre: 0.25 kN/m²
Width of load perpendicular to beam, or height of load supported by beam: 0.55 metres
UDL 4: Timber Stud Wall + 2 Sheets of Plasterboard
Permanent (dead) load per square metre: 0.5 kN/m²
Variable (live) load per square metre: 0 kN/m²
Width of load perpendicular to beam, or height of load supported by beam: 0.45 metres

Calculations

Bending moments
Mc,y = 86.4kNm > 34.23kNm, Therefore OK
Mc,y value from Tata Steel 'blue book' to BS EN 1993-1-1
Mb = 50.2kNm > 34.23kNm, Therefore OK
Mb value INTERPOLATED from Tata Steel 'Blue Book' to BS EN 1993-1-1
C1 value conservatively taken as 1.0

Shear forces
Shear capacity Vc = 231kN x 0.5 = 115.5kN > 27.39kN, Therefore OK
Shear Capacity, Vc from Tata Steel 'Blue Book' to BS EN 1993-1-1
Reduction of moment resistance by high Coincident shear force has been avoided by checking that the shear force is no more than 50% of the shear resistance

Deflection
Variable load deflection = 4.76mm < 13.89mm, Therefore OK
Total load deflection = 10.33mm < 25mm, Therefore OK

Notes
Mc,y value from Tata Steel 'Blue Book' to BS EN 1993-1-1
Mb value interpolated from Tata Steel 'Blue Book' to BS EN 1993-1-1
C1 value conservatively taken as 1.0
Shear Capacity, Vc from Tata Steel 'Blue Book' to BS EN 1993-1-1
Reduction of moment resistance by high coincident shear force has been avoided by checking that the shear force is not more than 50% of the shear resistance
Ends of beam are to be laterally restrained. Ends of beams can be laterally restrained using one of the following methods;
1) End of beam built into masonry wall.
2) End of beam fixed to a masonry wall.
3) End of beam fixed to a column or a beam.

The designer is to ensure that the proposed detail adequately ensures that the end of the beam is laterally restrained.

No allowance has been made for destabilising loads which are outside the scope of these calculations (Destabilising loads would not normally occur in a traditional masonry structure)
